

info@farmudding.com wants to thank you for purchasing a Halo Kit!

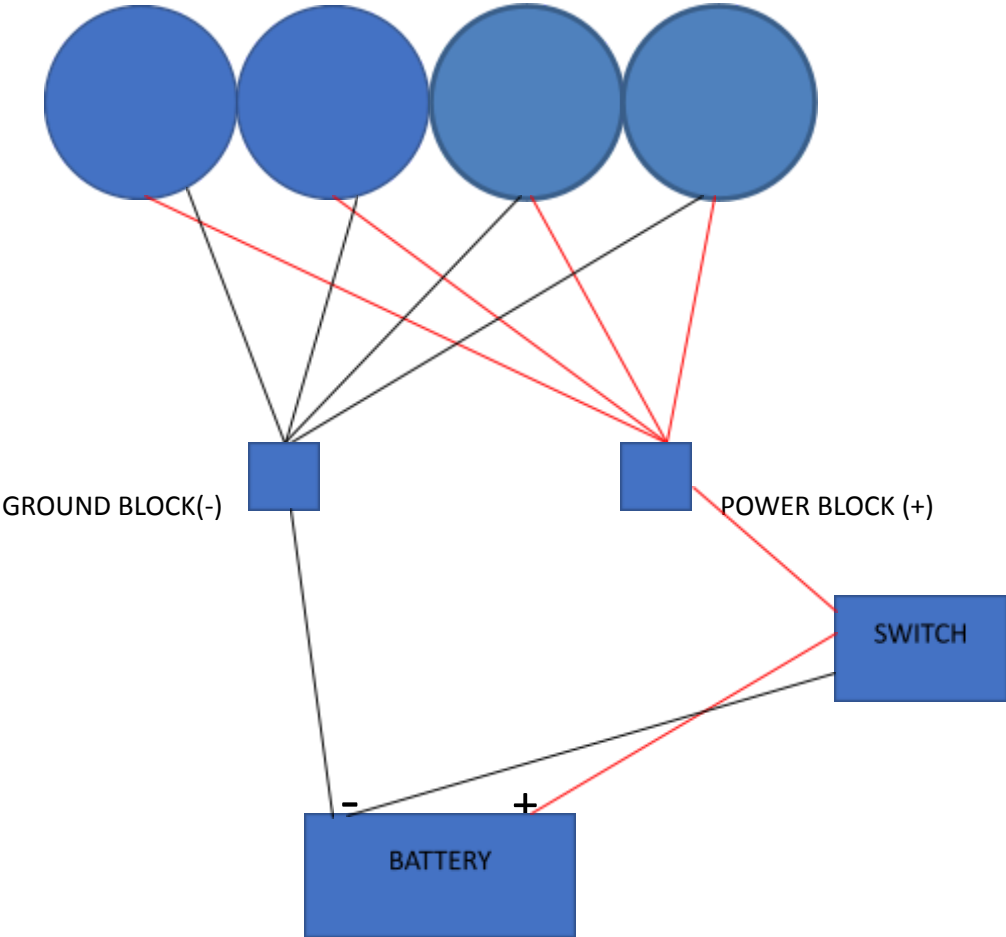

Do **NOT** cut **OR** shorten the wires of halos, When cleaning halos avoid direct contact with high-pressure water sources that may harm the coating and void the warranty. All halos are bench-tested before Shipment. A switch is provided for you to splice into the positive and ground (red(+)) and black(-) Leads) and use the switch to power on and off the halos. **When wiring or testing halos, always power off when making connections. There will be six plugins on the 2.0 Chasing Bluetooth module, ONLY 4 plugins will be used for the halos (the other two are for rock lights or our Chasing strip that is compatible with the 2.0 module which is sold separately).**

How to install the Chasing Halo Kit 2.0: We always recommend that you remove the headlights from the vehicle. You will need to clean the area with rubbing alcohol and make sure the headlights are free of dirt and debris. Peel the doubled sided tape and stick it on each halo, **(we have provided a clear tube of silicone if you can not get the surface clean enough)** Apply a thin bead of silicone to the rear side of the halo and let them set up before re-installing them on to your machine. Run wires as necessary. Now that you have secured the halo light to the machine's headlight housing you can place the control box on your vehicle and plug the wires into it. The BLUETOOTH BOX will need to be mounted at the highest point on your vehicle. Now you can start connecting them to a 12v power supply. To properly supply 12v to each halo you may choose several options:

1. You may splice directly to your headlights (power supply) so they turn On and OFF with the headlights
2. You can choose to splice into the accessory plug (12v accessory plug) allowing the lights to turn on and off with the key separate from the headlights
3. You may use the positive wire to the battery and the negative wire to the battery or a ground close by and then with the switch to turn them On and OFF with Our switch provided (gold negative) (2 silver Positive
