

Taillights install

Remove taillights, but please keep your existing nuts and bolts.

The taillights will bolt right up to the existing holes. You will be reusing the nylon factory nut. We will provide 4 new bolts.

There is a factory connector to plug the taillights back in directly once you unplug your factory ones.

Once you have them installed you will wire tie up any loose wires, please make sure you have enough room under the machine to keep the wires away from the exhaust or being ripped out.

-We will not warranty any improper installation-

SOLD SEPARATE

If you purchased a set of chasing halos 2.0, the rear halos will connect to the harness with the other 2 existing plugs
